

## Well connected

### EVOLine® APSA – industrial sockets from Schulte Elektrotechnik

Lüdenscheid, Germany, October 2022. Since Schulte Elektrotechnik acquired the APSA brand, alongside its well-known EVOLine products, the company has been producing and selling customisable power modules for an industrial line called EVOLine® APSA. The tried-and-tested APSA 6000 and APSA 7000 series are additions to the portfolio. These lines are now produced at Schulte Elektrotechnik's plant in Lüdenscheid and used in industrial companies and workshops, offices and schools. Like all of Schulte Elektrotechnik's solutions, the EVOLine® APSA power outlet strips also stand for German-made quality and reliability.

The first-class APSA, 19-inch power outlet strips are called EVOLine® APSA and part of the popular EVOLine range. As a result, planners can conveniently obtain all power components from one source. APSA power outlet strips were designed for public buildings, service providers' premises and IT facilities. Special mounts make the 6000 series easy to fit to technology-driven workspaces. The 7000 series of 19-inch power outlet strips is ideal for mounting horizontally or vertically in control cabinets. At a height of 44.45 millimetres, they cover exactly one rack unit. A continuous brass busbar provides enough power for up to 12 sockets. Both series score top marks for custom-configurable functionality and ensure a reliable power supply at all times because all EVOLine® APSA products meet the stringent electrical engineering standards and safety regulations imposed by the VDE (German Association for Electrical, Electronic and Information Technologies).

### German-made quality

The configurable EVOLine® APSA power outlet strips are made in the Schulte Elektrotechnik plant in Lüdenscheid, Germany. The factory has its own plastic and contact component production lines and uses APSA's tools, all of which Schulte Elektrotechnik inherited when it took over the company.

Schulte Elektrotechnik's long-standing experience in developing and making sockets and power modules is a guarantee of top quality, reliable industrial sockets too. The new EVOLine® APSA industrial line allows the company to expand its capabilities at the Lüdenscheid site. "Once again, we've managed to offer high-tech product lines from one

single source, inspected and made by Schulte Elektrotechnik in Lüdenscheid,” says Siegfried Schulte, founder and owner. The APSA and EVOLine merger means skills are retained in Germany and synergy is harnessed to create future-proof power and data solutions.

### **About Schulte Elektrotechnik**

APSA is owned by Schulte Elektrotechnik. In 1964, Siegfried Schulte started an engineering business in Lüdenscheid – and is still working on his vision of making electrical products safer and more intelligent. In addition to high-quality EVOLine power modules for workspaces and homes, the company also makes the EVOLine® APSA industrial line. As modular system solutions for power connections, EVOLine® APSA products can power offices, public buildings and service providers’ facilities. Today, Schulte Elektrotechnik has more than 30 sales partners worldwide. The EVOLine® APSA products are made by around 220 employees at Schulte Elektrotechnik’s site in Lüdenscheid at a significant degree of vertical integration. The high proportion of manual work carried out in the production process guarantees first-class craftsmanship.
