

## **PRESS RELEASE**

**Space-saving genius for dynamic working environments - EVoline Up, the new electrification system**

**Luedenscheid, October 2018. Slim, robust and flexible: With its vertical electrification solution Up, EVoline is showcasing a true space-saving genius at this year's ORGATEC. Not only can the pedestal of the vertical multi-socket be screwed firmly onto the base but with the help of adhesive strips it can also be securely attached to any table surface – even glass – and removed without leaving behind any residues, so the Up can be easily reinstalled at another location.**

Our working environments are becoming increasingly dynamic and, as a result, they demand maximum flexibility and adaptability. That makes a high-quality technical infrastructure, with quickly and easily accessible power and data connections a key requirement for everyday office working. Up, the new electrification solution from EVoline, meets all the requirements in this respect, with an impressive space-saving vertical design and flexible installation options.

### **Easy access and compact design**

Thanks to its slim shape, the Up from EVoline fits onto any work surface no matter how small, providing really convenient access to power. It organises the key connections at the workplace and bundles them within easy reach on the desktop. Standard surface finishes are black, white or brushed stainless steel. The vertical multi-socket can either be screwed firmly onto the base or, with the help of adhesive strips, attached quickly and securely to any work surface – even glass – and, if necessary, removed without leaving behind any residues. So the electrification system can be easily re-installed at a new location in the event of a reorganisation.

### **Custom configuration**

EVOLine offers a wide range of international power sockets as well as single and double USB chargers for the UP which can be custom-combined for specific usages. Thanks to the individually customised electrification solution, an appropriate system can be created for every application.

### **About Schulte Elektrotechnik**

EVOLine is a brand name of Schulte Elektrotechnik. In 1964 Siegfried Schulte went into business for himself in Luedenscheid, Germany, as an engineer – and to this day he is still working on his vision to make electrical systems safer and smarter. As a provider of modular system solutions for power sockets and data ports, EVOLine develops product solutions for the entire spectrum of electrification of office environments as well as residential spaces. Today Schulte Elektrotechnik is active worldwide with more than 30 sales partners. All EVOLine products are manufactured by some 170 employees at Schulte Elektrotechnik in Luedenscheid with extensive production depth. The large proportion of manual assembly in production ensures the high quality of workmanship. EVOLine has won several design awards, in 2017 alone it took the ICONIC Award in the *product best of best* category, was the *winner* of the German Design Award and the iF Design Award.
